

Application Serial No. 10/645,849

IN THE SPECIFICATION:

Amend the paragraph at page 12, line 16:

The reproducing state changing section 120 recognizes the instruction for changing the reproducing state of the optical disk and outputs an operation signal by detecting that the touch sensor 121 is touched or pressed, or that the touch sensor 121 or the jog dial circumference section 122 is rotated. Thus, the touch sensor 121 can be a single device that detects both pressing and rotation of that single device.
